Three dimensional structure of the transmembrane region of the proto-

Three dimensional structure of the new protein.";

EMBO J. 11:43-4811992).

-1- FUNCTION: Essential component of a newregulin-receptor complex,

althought newregulins do not interact with it alone. GP30 is a

potential ligand for this receptor. Not activated by EGF, TGF-

alpha and amphiregulin.

-1- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein

tyrosine phosphate.

-1- CATALYTIC Heterodimer with each of the other ERBB receptors. The

constitutively activated oncogenic variant forms a homodimer.

-1- SUBCELLULAR LOCATION: Type I membrane protein.

-1- FPM: Ligand-binding increases phosphorylation on tyrosine residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This SWISS-PROT entry is copyright. -!- FUNCTION: Essential component of a neuregulin-receptor complex, althought neuregulins do not interact with it alone. GP30 is a potential ligand for this receptor. Not activated by EGF, TGF-alpha and amphiregulin (98 similarity).

-!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein
                                                                                                                                                             15-DEC-1998 (Rel. 37, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This is the human heregulin 2 (Her2) sequence. Immunogenic analogues of Her2 can be used in the claimed method as an autovaccine to induce a CTL response. Subdominant CTL epptropes, antibody binding regions and cysteine residues involved in disulfide bonds are preserved in the immunogenized forms. Regions suitable for the insertion of foreign T helper epitopes were identified (see features table). The method is used for inducing immune responses against weakly immunogenic cell-associated peptide antigens (PA) such as those associated with cancers (self-proteins), e.g. human prostate specific membrane antigen (PSM), heregulin 2 (Her2) and/or fibroblast growth factor 8b (FGPBb). The method comprises effecting simultaneous presentation by antigen producing cells (APCs) of the animals immune system of: (I) at least 1 B-cell group derived from the PA and/or at least 1 B-cell group derived from the PA and/or at least 1 B-cell group derived from the enimal. Analogues of human PSM, human HEr2 and human Munich EGPBb comprising a substantial part of all known and predicted CTL and B-cell epitopes of the respective PA and including at cleast noe foreign T helper epitope are also claimed. The method is used to treat prostate, prostate/breast or breast cancer when the PA is human PSM, FGFBb and Her2, respectively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 immune responses to weakly immunogenic, tumor associated peptide for the treatment of breast and prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nielsen KG, Haaning J, Leach D, Dalum I;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   83
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides a method of treating cancer by administering a conjugate of anti-ErbB antibody with a maytansinoid. In particular, the antibody is directed against ErbB2 (also known as HER2 and p185ens). The method is particularly useful in the treatment of breast, ovarian, stomach, endometrial, salivary gland, lung, kidney, colon, colorectal, thyroid, pancreatic, prostate and bladder cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ErbB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to synthetic therapeutic compounds (antigenic peptides) with enhanced binding to major histocompatibility complex (MiC) molecules and enhanced immunoregulatory properties relative to their natural counterparts. Compounds of the invention are useful for inducing an immune response in a subject and for use in adoptive immunotherapy. They are useful as components of anti-cancer vaccines and to expand immune effector cells that are specific for cancers characterised by expression of the breast cancer antigen, HER-2. Polymucleotides that are morode peptides of the invention are useful as hybridisation probes and as primers for the detection of genes of gene transcripts that are expressed in antigen presenting cells (APCs), to confirm transduction of bolymucleotides into host cells. The present sequence is human tyrosine kinase-type receptor, HER-2. Compounds of the invention are designed based on the HER-2 antigenic peptide (774-782)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel synthetic therapeutic compound for inducing immune response and use in adoptive immunotherapy, has enhanced binding to major histocompatibility molecules and enhanced immunoregulatory properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    QVCTGTDMKLRLPASPETHLDMLRHLYQGCQVVQGNLELTYLPTNASLSFLQDIQEVQGY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a transgenic non-human mammal that produces in its mammary gland cells detectable levels of a native human HER2 protein or its fragment. The transgenic animals are useful as tumour models for testing HER2-directed cancer therapies, and for identifying anticancer agents. The animals may also be used as source of cells which can be immortalised in culture, in screening for compounds that have potential as prophylactic or therapeutic treatments of diseases or disorders involving expression of HER2. The anti-cancer molecules are useful for inducing apoptosis or cell death of cancer cells. The present sequence is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Inducing or enhancing an immune response against an antigen, particularly cytotoxic T-lymphocyte responses, for treating or ameliorating prostate or breast cancer, comprises administering the antigen formulated with chitosan.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method for inducing or enhancing an immune response against a polypeptide antigen in an animal, including human. The method comprises administering the polypeptide antigen or at least one variant which includes it least one first T-helper cell epitope that is foreign to the animal (foreign TH epitope) and is formulated with chitosan. The polypeptide antigen is weakly immunogenic or non-immunogenic. The invention is used as vaccine. The chitosan and polypeptide antigen or its variant are useful in the preparation of an immunogenic composition for inducing or enhancing an immune response, particularly CTL response, against the polypeptide or protein antigen. The method for inducing or enhancing an immune response is useful in treating or ameliorating concer, e.g. prostate or breast cancer. The present sequence is human Herz antigen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to treating a tumour in a mammal, where the tumour is characterised by the overexpression of an epidermal growth factor receptor (ErbB) and does not respond or responds poorly, to treatment with an anti-ErbB antibody, comprising administering to the mammal an anti-ErbB antibody—mayransinoid conjugate. The method is useful for treating cancer or tumours of the breast, ovary, stomach, endometrium, salivary gland, lung, kidney, colon, colorectum, thyroid, pancreas, prostate and bladder, preferably breast cancer. The breast cancer is a metastatic breast cancer on an aggressive form of metastatic breast cancer which overexpresses ErbBz. The method is also useful for treating neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, epithelial, stromal, blastocoelic, inflammatory, angiogenic and immunological disorders. This sequence represents the human HERZ (ErbBz) polypeptide of the invention

                                                                                                    The present invention describes a method for assessing whether a patient is afflicted with breast cancer. The method comprises comparing the level of expression of a marker (gene/polypeptide see AC50076 to AC50334 and ABR47386 to ABR47632) in a patient sample and the normal level of expression of the marker in a control non-breast cancer sample, where a significant increase in the level of expression of the marker in the patient sample and the normal level is an indication that the patient is afflicted with breast cancer. The breast cancer associated sequences from the present invention have cytostatic activities and can be used in gene therapy. The method is useful for diagnosing and treating breast cancer. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Breast cancer diagnosis or treatment by comparing the level of expression of a marker in a patient sample with that in the control non-breast cancer sample.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes an isolated epitope (I) and an epitope cluster. Also described is a vaccine or immunotherapeutic composition (VC) comprising (I). (I) has cytostatic activity. VC is useful for treating an animal, by administering to an animal the vaccine or immunotherapeutic composition. VC is also useful for evaluating immunotherapeutic composition. VC is also useful for evaluating immunotenicity of a vaccine or immunotherapeutic composition, by administering VC to an HLA-transgenic animal and evaluating immunogenicity based on a characteristic of the animal, or by in vitro primary stimulation of a T cell and evaluating immunogenicity. (I) is useful for determining specific T cell frequency, by contacting T cells with a MRC-peptide complex, and further comprises ELISPOT analysis, imiting dilution analysis, flow cytometry, in situ hybridisation analyor polymerase chain reaction (PCR). ABQ83843 to ABQ83858 and ABP74128 to ABP74111 represent sequences used in the exemplification of the present

Sequences of the invention are useful in the diagnosis, prevention and treatment of disorders characterised by BrbB2 overexpression (e.g. breast sequence). The invention is also useful in protein therapy. The present sequence is human c-erbB2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                           A composition for diagnosing, preventing or treating disorders characterized by ErbB2 overexpression (e.g. breast cancer) comprises an ErbB2 binding peptide that binds specifically to the extracellular domain of ErbB2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     83

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a novel medical method comprising providing an implantable microscopic device including a nanostructure provided with a light light of the microscopic device is a light of a predetermined chemical or molecular site. Specifically, the microscopic device is directly implanted into patients at predetermined sites, and on reaching the target site the nanostructure is activated to perform a preselected medical diagnostic or therapeutic function. Accordingly, the present invention describes using this method for the treatment of various illnesses including gout whereby the target is a urea deposit that can be disrupted by activation of the nanostructure, as well as bone injuries and cancer. Furthermore, the target can consist of a microorganism containing a strand of viral DNA, such that heating the nanostructure can destroy the microorganism, which in turn can be used therapeutically to treat HIV patients. This polypeptide sequence is the human erb-B protein that is over expressed in human breast tumour cells and therefore acts as target for a nanostructure of the invention.

Containing a dimer of a complex of EGF with EGFR in the molar ratio 1:1.

Containing a dimer of a complex of EGFR with EGFR in the molar ratio 1:1.

Also described: (1) preparation of EGFR with EGFR in the molar ratio 1:1.

Which recombinant EGFR is prepared using Lec8 cells and then deglycosylated using glycosidase; (2) preparation of a complex of EGFR or virth EGF or with another EGFR activity regulator (1), in which consists and antagonists of EGFR activity regulator (1), in which consists and antagonists of EGFR; (5) sereening method for use as agonists and antagonists of EGFR; (5) sereening method for use as agonists and antagonists of EGFR; (5) sereening method for use as agonists and antagonists of EGFR; (5) sereening method for use as epitopes identified; (7) anti-EGF or anti-EGFR antibodies using the EGF-EGFR interaction of anti-EGF or anti-EGFR antibodies using the epitopes identified; (7) anti-EGF or anti-EGFR antibodies using the ceptopes identified; (7) anti-EGF or anti-EGFR antibodies using the complex; (6) preparation of anti-EGF or anti-EGFR in the comparing and (8) polypeptides and their salts containing all or part of the amino acid sequence of the EGFR dimerisation site. (C) has contification of sonser and cancer proliferation, liver than the EGFR for use in the continuity and prevention of cancer and cancer proliferation, liver function disorders, ulcers (including stomach ulcer, skin ulcers includence represents a ratising from diabetic complications). Parkinson's disease, bone responsents and runan ErbBz amino acid sequence, which is used in the exemplification of such and provention of sequence, which is used in the exemplification of sequence, which is used in the exemplification of sequence, which is used in the exemplification of sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Crystalline complex of epithelial growth factor with its receptor for design of ligands and antibodies to the receptor for treatment of ulcers, cancer and Parkinson's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             present invention describes crystals of a complex (C) of epithelial

                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a non-naturally occurring human epidermal growth factor receptor (HER)-3 variant polypeptide comprising amino acids 19-329 or 20-329 of the 1342 amino acid HER3 polypeptide (ABB6761) or a cor20-329 of the 1342 amino acid HER3 polypeptide and having amino acid substitutions at residues E43, N44, K51, E64, V66 and V110 of S1, is new. The variant HER-3 specifically binds to the heregulin polypeptide (ADB6761), or has an ability to interact with HER2 polypeptide (ADB67621), or has an ability to inhibit the interaction between wild-type HER3 and heregulin. The polypeptide is useful for identifying a compound which specifically binds to heregulin binding domain in a HER3 variant polypeptide. The method further involves determining whether the test compound inhibits or enhances the heregulin induced tyrosine kinase activity associated with a HER3 polypeptide. The polypeptide is also useful for determining whether a test compound modulaces the interaction between a heregullin polypeptide, and the variant HER-3 polypeptide is also useful for variant HER-3 polypeptide is also useful for

The invention may also be useful for the development of cytostatic compounds through the regulation of the expression of a gene or activity of a protein associated with malignant neoplasia. The method is useful for prediction, diagnosis or prognosis of malignant neoplasia such as breast cancer, ovarian cancer, pastric cancer, colon cancer, oesophageal cancer, mesenchymal cancer, bladder cancer or non-small cell lung cancer. The polynuclectides and polypeptides defined in the specification, antisense polymuclectides targeting the polymuclectides, anticones are polymuclectides, and compounds identified by the screening methods are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   at
